\*Workshops to include: Video case studies and using Maths Recovery in the classroom and journey to becoming an MR Trainer

## WHAT IS MATHS RECOVERY?

**Mathematics Recovery is a long established international intervention programme operating throughout the English-speaking world since 1992.**

Maths Recovery offers a unique approach to extending children's number knowledge, understanding and strategies. The strongly research-based programme offers an extremely detailed profiles-based assessment of pupils in respect of these areas and provides a framework for individual, group or class-based instruction which is suitable not only for pupils who are experiencing difficulties but also for average and more able children.

Professional development in the Maths Recovery Programme prepares teachers to approach mathematics instruction in a new way. It engages teacher reflection through the use of filming of both the assessment interviews and the teaching.

We have an excellent team of fully accredited trainers who have experience of training teachers and teaching assistants throughout the UK and Ireland. Our Maths Recovery training has achieved the NCETM CPD Standard.

If you would like to arrange Mathematics Recovery training for your organisation (LA, school or other setting), please contact

[mathsrecovery.England@googlemail.com](mailto:mathsrecovery.England@googlemail.com)
